SUMMARY

Full stack developer with a back-end foundation: I build APIs, organize business rules and connect systems. I work mainly with Java (Spring Boot) and Angular, and also develop with React and Node.js, using Docker and Kubernetes to standardize and deploy environments. A Software Engineering student, I am looking for real projects where I can contribute and keep growing.

EXPERIENCE

MARINHA DO BRASIL | SOFTWARE DEVELOPMENT INTERN — **ON-SITE** | Apr. 2026 - Present

FINANCIAL PROCESS MANAGEMENT SYSTEM

- Full stack development of a web system to manage financial processes, covering resource requests, approval flows, tracking of grants and accountability, with an estimated 60% reduction in the manual procedures needed to process each case.
- Implemented integrations with corporate systems, including an external document management platform for processing and electronic signature, plus queries to database views to validate financial requirements and apply business rules.
- Implemented OCR with Python and PaddleOCR to automatically extract data from expense receipts, with an estimated 70% reduction in processing time and an estimated 90% data extraction accuracy.
- Containerized the applications with Docker and used Kubernetes to orchestrate and deploy the services, with an estimated 30% reduction in deployment time.

LEGACY ADMINISTRATIVE SYSTEM MODERNIZATION

- Took part in refactoring and modernizing a legacy administrative system written in Java, Spring and JSP, moving to a modular monolith architecture, with component reorganization, new features and bug fixes, aiming at an estimated 30% reduction in maintenance time.
- Contributed to migrating authentication from sessions to JWT, modernizing the authentication mechanism and enabling integration with external systems.
- Modernized the infrastructure with Docker and Kubernetes, standardizing runtime environments and making the application easier to deploy and maintain, with an estimated 40% reduction in environment setup time.

ESTÚDIO MADIGUI | FREELANCE DEVELOPER — **REMOTE** | Jun. 2025

- Built a Node.js and TypeScript automation integrated with Google Drive to capture download logs.
- Automated the extraction of data such as email, time and file name, with an estimated 47% reduction in manual interventions.
- Automatically sent the information over WhatsApp with EvolutionAPI and Axios.
- Containerized the application with Docker to standardize the environment and ease deployment.

EDUCATION

UNIVERSIDADE ESTÁCIO DE SÁ — Jan. 2024 - Dec. 2027

Software Engineering - In progress (6th semester)

TECHNICAL SKILLS

LANGUAGES	Java | Python | TypeScript | JavaScript | SQL | NoSQL | HTML5 | CSS3
FRAMEWORKS	Spring Boot | Angular | Node.js | Express.js | NestJS | ReactJS | NextJS
DATABASES	PostgreSQL | MySQL | Mongo
TOOLS	Docker | Kubernetes | Git
SOFT SKILLS	Adaptability | Teamwork | Proactivity | Problem solving
